Rosenberg, 3 June 2019

PRESS RELEASE

Change of Managing Director at ZweiCom-Hauff

Rosenberg, 3 June 2019 – Mirja Rasmussen will be the new managing director of the Swabian specialist for fibre-to-the-home components as of July 1, 2019. Previous managing directors Reinhard Feltgen and Horst Scheuring will step down from their positions on 30 June 2019.

Mirja Rasmussen has more than twelve years of professional experience to her name in the fibre optic sector. Most recently, Mirja Rasmussen was business development manager with Camozzi, an automation company in Albershausen, Baden-Württemberg, where she built up the C_FTTx division. Prior to this, she worked for six and a half years at Langmatz, a manufacturer of systems in the telecommunications, energy and traffic technology sectors. There she was sales manager for the regions Baden-Württemberg and Saarland and established the Broadband Symposium with Open House – an event that is widely recognized in the FTTx market nationwide.

She succeeds Reinhard Feltgen and Horst Scheuring, who for two and a half years have managed the fortunes of ZweiCom-Hauff, a joint venture founded in 2017. Reinhard Feltgen will relocate to North Rhine-Westphalia and will continue to be available to the company from there. In future, Horst Scheuring will once again join the extended management team of Hauff-Technik & Co. KG based in Hermaringen, focusing exclusively on the areas of national sales and marketing.

ZweiCom was founded in 2005 and has become the preferred specialist for fibre-to-the-home components thanks to its innovative strength and intelligent, high-quality solutions. These include products that are crucial in terms of the quality and performance of a fibre optic network: optical main distributors, multifunctional housings, splice sleeves and junction boxes.

ZweiCom-Hauff GmbH | Geiselroter Heidle 1 | 73494 Rosenberg, Germany

As a specialist for sealing solutions, Hauff-Technik has developed innovative building entry solutions for the future area of fibre optics, for example allowing the creation of FTTH building connections from the inside of the building.

With the foundation of the joint venture company ZweiCom-Hauff in 2017, innovative strength and a high level of consultation expertise has been brought together above and beyond each company's respective product portfolio. The focus of ZweiCom-Hauff is primarily on the industrial prefabrication of components for fibre optic installation. This results in faster installation times in the field as well as increasing the quality of your network. At the customer's request, ZweiCom-Hauff products can be delivered to the installation site ready for connection.

This gives the two companies' joint customers tangible added value, enabling them to benefit right away from comprehensive solutions which will be expanded in the future on a targeted basis.
