SPLICE/PATCH MODULES ZLINE SPM ST / SPM HD / SM / FOM

The ZLINE HydriPatch Modules are compact connection and termination solutions for our passive fiber optic network. The modules are designed for the highest fiber density and are used in all service environments. The high fiber and port capacities in all service environments make the ZLINE HydriPatch Modules the ideal solution for optical distribution, backbone and backbone access, as well as design guarantee safety and long operational life.

- Customer modules with the highest port density
- Hydrophilic coating
- Easy and fast installation assembly
- Working of the fibers and cable controlled via splicing
- Modular design for the optical components
- Additional features for installation and maintenance
- Working according to customer specifications

OPTICAL TELECOMMUNICATION OUTLET OTO

The OTO is a flat optic outlet that allows very compact and space-saving installation of optical fibers. The OTO is an ideal solution for backbone and backbone access. The modules are produced for all advanced POF2b applications.

- Optical flat fiber box providing a protected place for optical fibers and optical components
- Flat and modern design for surface mounted on walls or ceilings
- Surface fiber box provided, gasket and minimum bend radius
- Modular optic outlet reduces fiber tension at optical components
- Modular optic outlet supports multi-fiber optic splicing and fiber optic splicing

FIBER WORLD

SUB DISTRIBUTORS

As a micro-tube distribution cabinet or small distributor is the sub-distributor an above-ground connection point. Scalable and modular it can be adapted to the network structures. Special seals of the tube dressings are available.

- Network distributor

zweicom hauff

BETWEEN DISTRIBUTORS

The multifunctional cabinet is as another distributor point in the network. Modular with passive, active, power or copper components, it fits every topology. Cable glands are realised with sealings.

- Multi function cabinet
- Cable entries for between distributors

zweicom hauff

hauff technik

DISTRIBUTION HUB

Above ground at the wall or at the pole, underground in the ground or in the manhole, the small distributor is the last junction point. Operational safety is provided by an interfering Hauff sealing system and ensures easy installation.

- Optical termination closure
- Customer outlet box

zweicom hauff

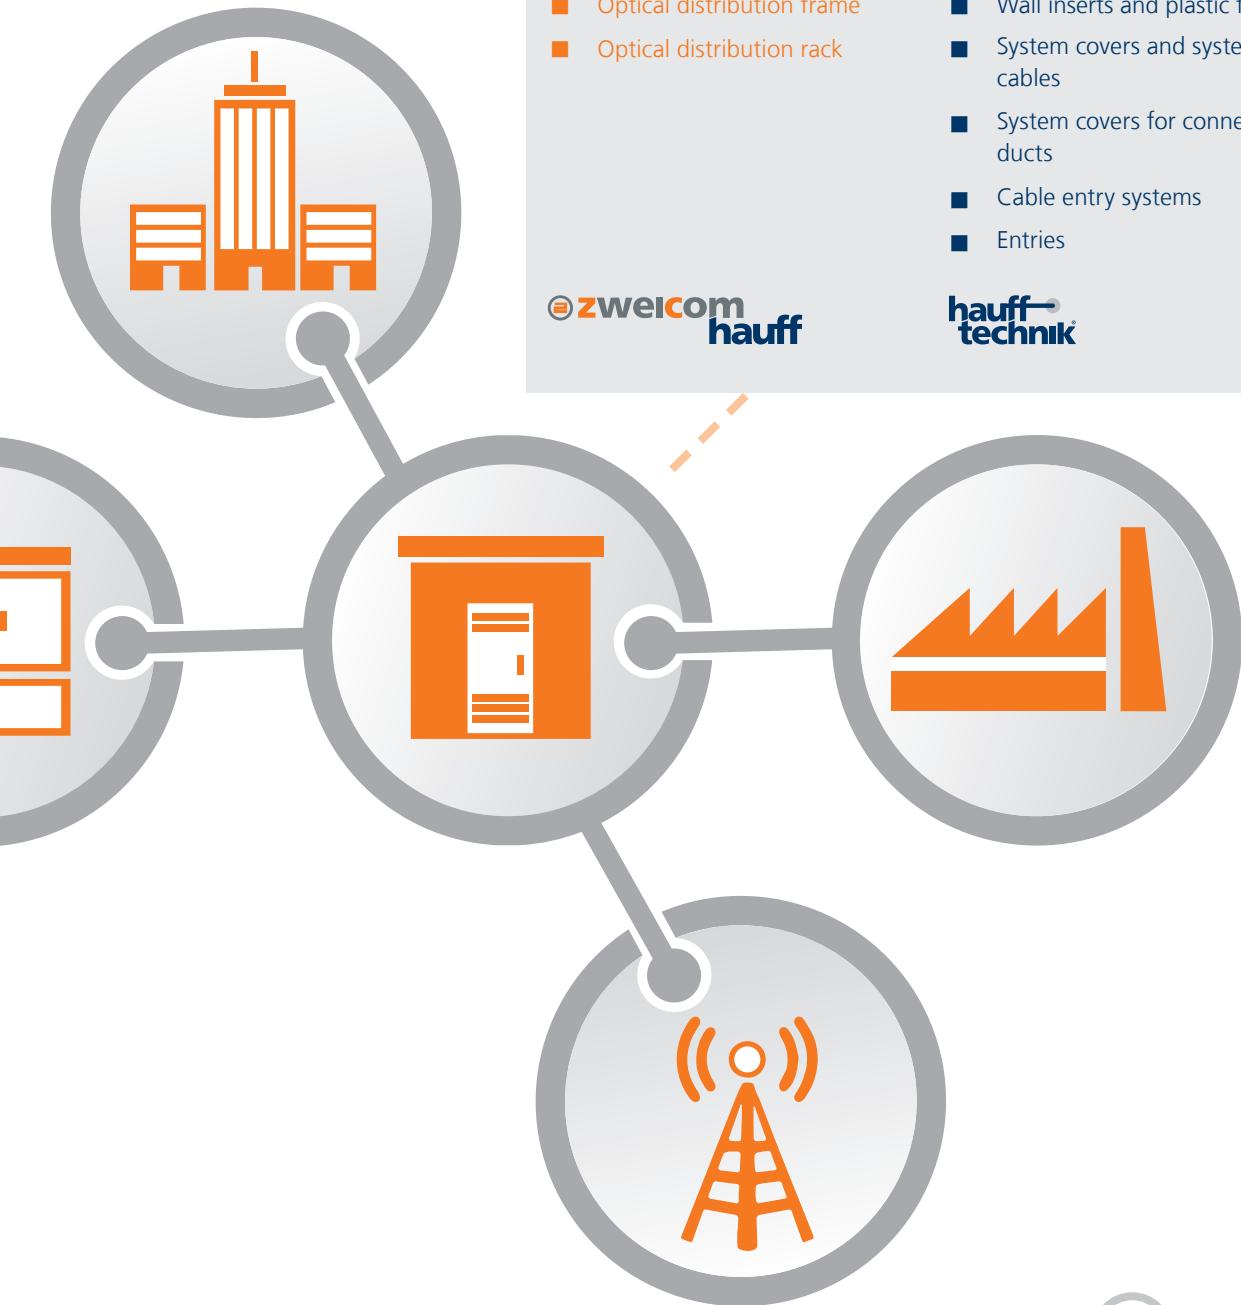

MAIN DISTRIBUTION FRAME

Starting point of a fiber optic network is the main distribution frame or PoP. Here you find the optical distribution racks (ODF/ODR) with the connections to the customers. Accordingly, for the PoP buildings here you find seals of tube dressings and cables.

- Optical distribution frame
- Optical distribution rack
- Wall inserts and plastic flange
- System covers and system seals for cables
- System covers for connecting cable ducts
- Cable entry systems
- Entries

zweicom hauff

hauff technik

OPTICAL LINE TERMINATION

As the completion of the fiber optic network, the optical line termination point ensures the safe handover of the optical signals. The passage of tube technology into building is realized by an easy to use building entry system.

- Optical wall outlet
- Optical customer outlet
- Optical telecommunication outlet
- Resin injection system

New concept for fiber optics

TWO STRONG PARTNERS FOR YOUR FIBER OPTIC NETWORK.

ZweiCom was founded in 2005 and thanks to innovative, intelligent and high-quality solutions has developed into a leading specialist in Fiber to the home components.

These components are key for a reliable and high performance fiber optic network such as: Optical Distribution Frames, Multifunctional Outdoor Cabinets, Network Distributors, Closures and Termination Boxes.

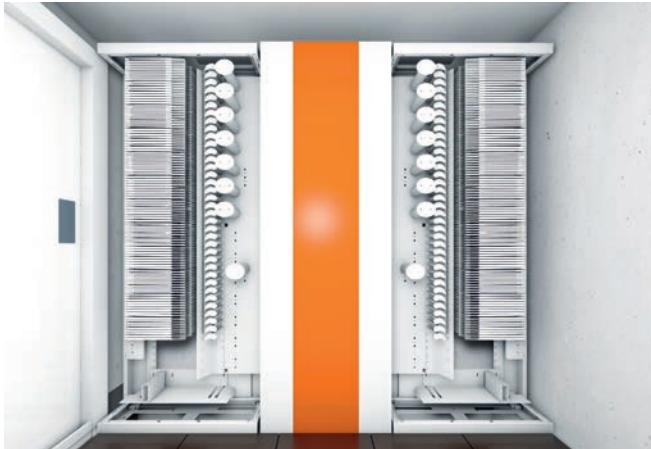

As specialist for sealing solutions, the company Hauff-Technik has developed innovating building entry systems for the future field of the fiber optic permitting for example to create FTTH house connections from the internal part of a building.

As one of Europe's leading manufacturers of sealing systems for cables, pipes and building entries, Hauff-Technik protects buildings from penetrating water, gas, fire, dirt and vermin.

Our innovative solutions guarantee absolute leak tightness, economic efficiency, user friendliness and durability in all kinds of construction work. From detached houses to various construction services through to large infrastructure projects such as airports and power stations.

Electricity, telecommunication, water, waste water, gas or district heating – whenever a perfectly safe sealing of building entries is required, Hauff-Technik offers the best possible solution. Innovative cable and pipe entries, building entries and trenchless building connections in professional quality. All from one source.

With the foundation of a new joint venture company ZweiCom-Hauff, the logical grouping of innovating force and high-quality consultancy competence beyond the respective product portfolio was implemented. This way, the common clients obtain a perceivable plus value and profit from now from the extensive complete solutions which will be developed in future in a more-targeted way.

- Pre-assembled and ready to connect.
- Customer specific.
- Best quality and powerful components for fiber optic networks.
- Time and cost saving by pre-assembled complete solutions according to the requirements.
- Fast amortization by failure-free operation for many years.
- Personal consultation and fast delivery.

TURNKEY POP-STATION

A perfect example is the turnkey PoP station in which the passive network components of Zweicom-Hauff with the sealing solutions of Hauff-Technik are combined in an all-round carefree package for the network operators.

BUILDING ENTRY

Also for a single and multi-family home area there are direct interfaces. So the micro tube first has to get into the building and sealed before the fiber optic cable can be installed in the house to the optical wall outlet.

- Building entry and local loop.
- Easy to mount.

Turnkey stations

POINT OF PRESENCE

POP STATION

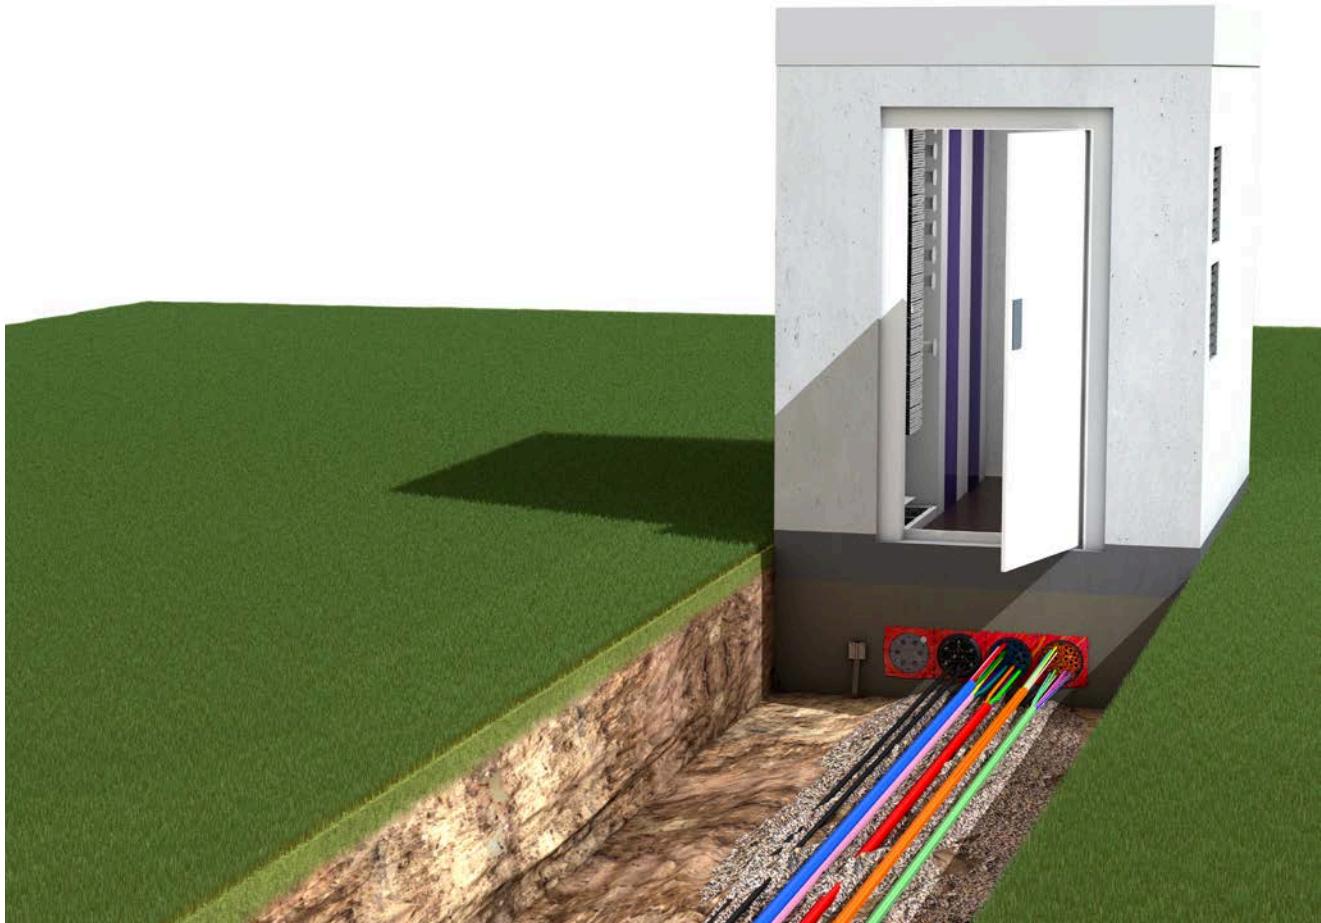

Through the experience of our partners in station expansion and our specialization in fiber optic networks, we can individually configure your PoP station and deliver it safely.

Features and technical data:

- reliable cable management
- supports P2P, PON, Hybrid
- UPS (uninterruptible power supply)
- 48VDC/230VAC battery inverter
- overvoltage protection, smoke alarm, intrusion detector
- fire extinguishers, emergency lights and emergency signals
- furnishing, special paintings and designs
- access control systems, remote monitoring
- all passive fiber optic components installed
- electrical distribution, lights, cable ducts and internal wiring
- air conditioning, heating, ventilation
- burglar-proof door, raised floor and drainage
- 19 „/ETSI rack systems and active equipment

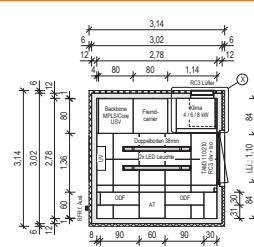

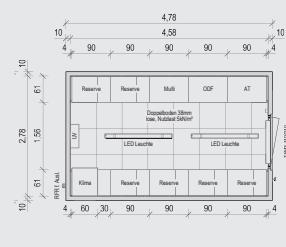

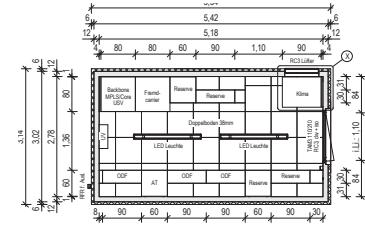

- Customized.
- Ready for use.
- Pre-assembled.

Turnkey stations

OPTICAL DISTRIBUTION FRAME

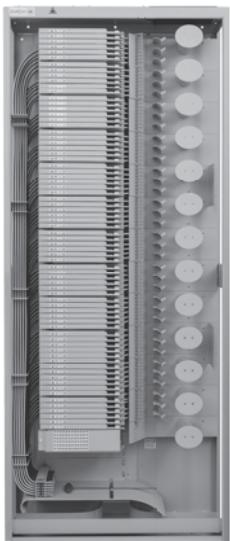

FIBER OPTIC CABLING SYSTEM

The 2Line ODF ST is a complete fiber optic cabling system in combination with an easy to handle patch cable management system – especially for high density networks.

Features and technical data:

- flexible system with high fiber density
- customized configuration
- bend radius control for all cables, fibers and patchcords
- central fiber optic cable management
- mounting body to body, wall or stand alone
- removable module system for easy splicing
- single standard length for patch cable management of 2.60 m reaching all modules

- Very cost and space saving distribution frame system with a capacity up to 2016 fibers.
- Fits perfectly to all variations of standard cable systems, micro cable systems and blown fiber systems.
- Customized pre-installation at our factory reduces installation cost on site by half.
- The patch cable management system uses only uniform patch cable lengths.
- Colored pigtailed and fibers.
- The cable fixing plate allows cable entry from top or bottom.
- Miniflex tubes for guiding loose tubes towards splice/patch modules.

FIBER OPTIC CABLING SYSTEM

The 2Line ODF HD is a complete fiber optic cabling system in combination with an easy to handle patch cable management system – especially for high density networks.

Features and technical data:

- flexible system with high fiber density
- customized configuration
- bend radius control for all cables, fibers and patchcords
- central fiber optic cable management
- mounting body to body, wall or stand alone
- removable module system for easy splicing
- single standard length for patch cable management of 2.60 m reaching all modules

- Very cost and space saving distribution frame system with a capacity up to 2592 fibers.
- Fits perfectly to all variations of standard cable systems, micro cable systems and blown fiber systems.
- Customized pre-installation at our factory reduces installation cost on site by half.
- The patch cable management system uses only uniform patch cable lengths.
- Colored pigtailed and fibers.
- The cable fixing plate allows cable entry from top or bottom.
- Miniflextubes for guiding loose tubes towards splice/patch modules.

OPTICAL DISTRIBUTION RACK

FIBER OPTIC CABLING SYSTEM

The ODR is an enhancement of the existing 2Line ODF-System for FTTx-fiber optic network.
It has a high fiber capacity and an easy operating fiber management system.

Features and technical data:

- flexible system with high fiber density
- customized configuration
- bend radius control for all cables, fibers and patchcords
- central fiber optic cable management
- mounting at the wall, at the sealing, back to back, or side by side
- removable module system for easy splicing
- single standard length for patch cable management of 2.60 m

- Cost and space saving distribution frame system with a capacity up to 2592 fibers or rather 42 HE.
- Fits perfectly to all variations of standard cable systems, micro cable systems and blow fiber systems.
- Short and easy assembly at site or customized pre-installation at our factory.
- Dissect deliverable in two packages of 30 kg.
- The patch cable management system uses only uniform patch cable lengths.
- The cable fixing plate allows cable entry from top or bottom.
- Miniflextubes for guiding loose tubes towards splice-patch-modules.
- Completely mirrored construction possible by symmetrical components.
- Fiber bundles as a guided variant in combs or with free channel individually selectable.
- Patch cable management in different variants.
- Installation of the modules standard, 19" back mounting or optional 19" front mount.
- Installation of deep 19" modules through back to back mounting with additional frame possible.
- Guided patch cable through cable duct at the bottom or through the roof frame.

Cable entries 150

WALL INSERTS AND PLASTIC FLANGE

SINGLE WALL INSERT FOR SETTING IN CONCRETE

Features and technical data:

- waterproof concrete stress class 1, stress class 2
- system seal can be connected on one side
- minimum wall thickness 70 mm
- blind cover and blind plate (to be knocked out) guarantee double safety at wall thicknesses 70 – 150 mm (in 10 mm steps)
- available for individual wall thicknesses ≥ 150 mm
- push fit socket frame system for block assembly
- pressure-tight up to 2.5 bar after concreting

DOUBLE WALL INSERT FOR SETTING IN CONCRETE

Features and technical data:

- waterproof concrete stress class 1, stress class 2
- connection of system sealing possible on both sides
- minimum wall thickness 100 mm
- available for individual wall thicknesses ≥ 100 mm
- push fit socket frame system for block assembly, available ex stock
- closed on both sides with blind system cover
- special designs for double wall/element walls available
- pressure-tight up to 2.5 bar after concreting

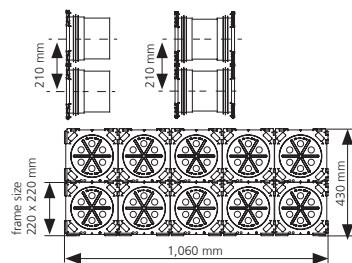

SINGLE WALL INSERT WITH RUBBER PUSH FIT SOCKET FOR SETTING IN CONCRETE CONNECTING SMOOTH CABLE DUCTS

Features and technical data:

- waterproof concrete stress class 1, stress class 2
- connection of system sealing possible on one side, with integrated push fit socket for connecting smooth cable ducts
- no additional pipe components required
- minimum wall thickness with pipe connection diameter 110 and diameter 125 mm: 120 mm
- minimum wall thickness for pipe connection diameter 160 mm: 180 mm
- maximum wall thickness 500 mm
- pressure-tight up to 0.5 bar depending on the cable duct used

double wall insert HSI 150 as block used in formwork

example as a 2x5 block used in formwork for 200 mm wall thickness:
article code: HSI 150-2x5-K2/200

| Double wall insert for double element walls | HSI 150-K2-EW/X | 2140304XXX * ¹ |  |
| Single wall insert with integrated push fit socket diameter 110 mm minimum wall thickness 120 mm | HSI 150-GSM 110/X *² | – * ¹ |  |
| Single wall insert with integrated push fit socket diameter 125 mm minimum wall thickness 120 mm | HSI 150-GSM 125/X *² | – * ¹ |  |
| Single wall insert with integrated push fit socket diameter 160 mm minimum wall thickness 180 mm, block assembly only in conjunction with spacer | HSI 150-GSM 160/X | – * ¹ |  |

X = wall thickness (mm)

*¹ The article numbers for the exact wall thicknesses can be found at: www.hauff-technik.de
Standard lengths: 70 up to 500 mm (gradation in 10 mm)

*² Restrictions regarding number and size of cables may apply

Slanted wall inserts (30°, 45° and 60 °) and special solutions according to DIN 18533 part 1 are available on request.

Matching accessories such as a spacer to enlarge the axial spacing to 250 mm or the pin spanner to remove and install the system cover can be found on page 68.

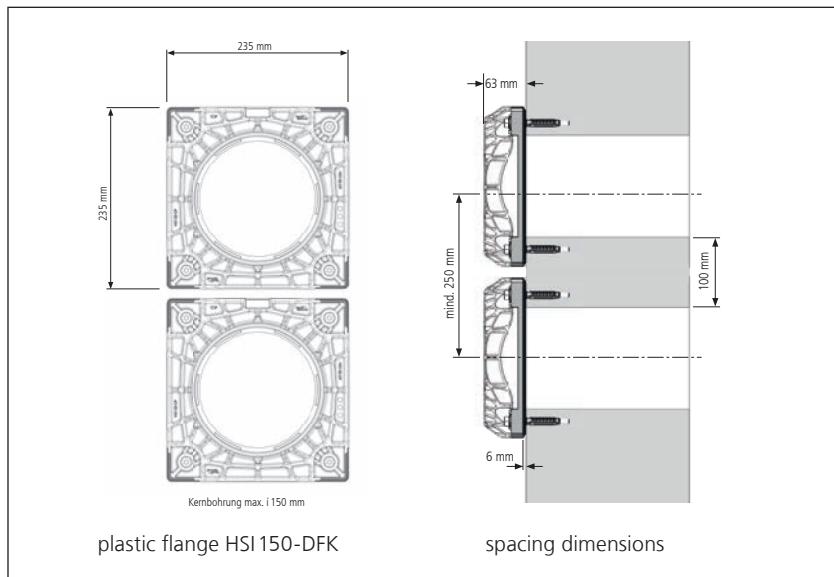

Cable entries 150

WALL INSERTS AND PLASTIC FLANGE

PLASTIC FLANGE FOR RETROFIT DOWELLING

Features and technical data:

- waterproof concrete stress class 1, stress class 2
- DIN 18533 W1.1-E, W1.2-E, W2.1-E
- flange in glass fibre reinforced polyamide with integrated spirit level
- form-closed surface seal made of EPDM
- high force absorption due to high-performance plastic, resistant to sea water
- core drill max. diameter 150 mm
- attachment elements made of stainless steel V4A (AISI 316L) including sealing rings against water ingress
- can be installed in container walls
- connection to system seal possible

SYSTEM COVERS AND SYSTEM SEALS FOR CABLES

SPLIT SYSTEM COVER FOR SUBSEQUENT SEALING

Features and technical data:

- split seal for retrofit installation
- individual adjustment to the diameter of the installed cable diameters on site
- labelled segment rings
- blind plug is included with HSI 150-DG-3/24-54 and HSI 150-DG-6/10-36
- transformer oil leak-tightness, tested over 90 days – KIWA Institute
- plastic press plate made of polyamide 6.6 with 30% glass-fibre reinforcement
- screws and nuts made of stainless steel V4A (AISI 316L)
- pressure-tight up to 2.5 bar

low-voltage cables sealed with HSI 150-DG-6/10-36

Matching accessories such as pressure plate cover and installation toolkit are to be found on page 68.

Cable entries 150

SYSTEM COVERS AND SYSTEM SEALS FOR CABLES

SEGMENTO SEGMENTS FOR INSERTION IN SYSTEM COVERS HSI 150-S3

Features and technical data:

- particularly flexible, gentle sealing
- for cables from diameter 5 to 31 mm
- individual clamping of segments
- no elaborate module structure
- easy and quick installation of segments that can be combined as necessary
- integrated torque control system
- simple to re-use and re-install
- all segment openings closed with blind plugs
- gastight and watertight up to 0.5 bar when installed on outside of the building

HSI 150 – wall inserts fitted with SEGMENTO sealing for control cables in a transformer house

Matching accessories such as the lubricant, assignment template and screwdriver for installation are to be found on page 68.

Cable entries 150

SYSTEM COVERS AND SYSTEM SEALS FOR CABLES

PRESS SEAL FOR MICROPIPES/EMPTY CONDUITS

Features and technical data:

- completely gastight and watertight
- sealing width 60 mm
- closed seal for waterproof sealing of micropipes
- for core drill holes/wall sleeves up to 150 mm diameter
- in combination with the adapter ring suitable for wall insert HSI 150
- press plate made from stainless steel V2A (AISI 304L), optionally V4A (AISI 316L)
- stable 5 mm press plates
- EPDM rubber

Cable entries 150

SYSTEM COVERS FOR CONNECTING CABLE DUCTS

SYSTEM COVERS WITH PUSH FIT SOCKET FOR SMOOTH CABLE DUCTS

Features and technical data:

- for smooth pipes and ducts
- easy and quick installation, no additional connecting components necessary
- economical solution
- compact design
- pressure-tight up to 0.5 bar depending on the cable duct used

SYSTEM COVERS WITH SLEEVE METHOD FOR SMOOTH AND CORRUGATED CABLE DUCTS

Features and technical data:

- can be used with for smooth and corrugated pipes and ducts
- patented clip ring technology for sealing corrugated pipes
(please indicate pipe type and pipe manufacturer)
- mechanically stable, elastic connection using special sleeves and jubilee clips
made of stainless steel V4A (AISI 316L)
- pressure-tight up to 0.5 bar depending on the cable duct used

SYSTEM COVER WITH COLD SHRINK-FIT METHOD FOR CORRUGATED CABLE DUCTS

Features and technical data:

- for corrugated pipes and ducts
- cold shrink-fit method, no tools necessary
- stress-free sealing for pressure-sensitive pipes
- pressure-tight up to 0.5 bar depending on the cable duct used

CABLE ENTRY SYSTEMS

SYSTEM COVERS FOR CONNECTION TO WALL INSERT HSI 150

Features and technical data:

- for connecting the spiral hose Hateflex 14150 to wall insert HSI 150
- mechanically stable, elastic connection with system sleeve
- gastight and watertight up to 2.5 bar

pressure-tight connection to HSI 150 wall inserts

SPIRAL HOSE

Features and technical data:

- pressure-tight flexible empty conduit system up to 2.5 bar (external pressure)
- smooth inner surface for gentle cable feed
- high mechanical load capacity and flexibility
- empty conduit system can be built over
- empty conduit without sleeve available up to 25 m, can be extended with connection sleeve
- adaptation with common cable ducts possible

INSULATED EARTHING ENTRY

Features and technical data:

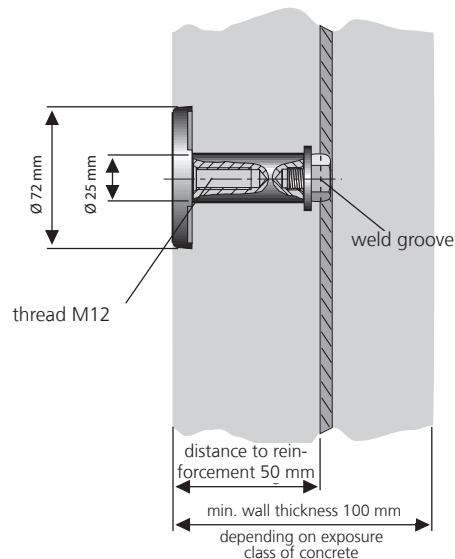

- waterproof concrete stress class 1, stress class 2
- conductor core diameter 25 mm with a threaded connection on both sides M12, made of stainless steel V2A (AISI 304L)
- pressure-tight water barrier (profiled rubber flange, EPDM)
- contact plate diameter 72 mm made of stainless steel V4A (AISI 316L)
- with protective cover
- minimum wall thickness HEA-IS: max. 70 mm
- according to VDE 0101, EN 50522
- short-circuit tested (with lightning protection)

EARTHING FIXED POINT WITH WELD GROOVE

Features and technical data

- waterproof concrete stress class 1, stress class 2
- conductor core, diameter 25 mm with threaded connection M12 made of stainless steel V2A (AISI 304L)
- fixed point with welded groove made of steel St37 to connect with 10 – 12 mm round steel
- contact plate diameter 72 mm made of stainless steel V2A (AISI 304L)
- protective foil green transparent
- spacing between formwork and the core iron 50 mm (HEA-A-M12/50) or 70 mm (HEA-A-M12/70)
- short-circuit tested according to VDE 0101, EN 50522

MULTI FUNCTION CABINET

MULTI FUNCTION CABINET

The MFC Outdoor-Street-Cabinet is a modern fiber optic node which fulfills all needs of a broadband network. Customized to the requirements of size, climatisation, safety and system, it represents a high density solution.

Features and technical data

- solid ground-base made from aluminium/stainless steel
- outside powder coated, color as requested
- environmental protection class IP55, -25 °C to +45 °C
- protection against destruction and vandalism, WK2
- doors with single or double closing and latching
- roof system for vent and climatization
- passive or active cooling system
- base-plates with modular sealed cable inlet
- base cable strain relief system
- lowest installation costs through preassembled setup
- modular subunits offer complete variable configuration
- supplied fully configured or single packed
- high fiber density
- bending radius control for all cables and fibers
- fiber management
- patch cable system with one single length

- The MFC system is a very cost and space saving outdoor street cabinet system with a capacity up to 3888 fibers which supports FTTx-networks.
- MFC fits all variations of standard cable systems, micro cable systems and blow fiber systems.
- Right to the customer demand the MFC can be equipped with climatisation, USV, Batteries, 19"-Frames, ETSI-Frames, fiber optic modules and cable management.
- To reduce the installation cost about 50 %, the MFC can be complete pre-installed/-wired delivered.
- Splitters, WDM's and attenuators are available.
- The micro-duct-management-system at the base, supports fixes, guides and overpasses all micro-ducts from 5 mm to 20 mm.
- Double-walled boards on a solid frame and a sealed baseplate protect the active or passive network installations from strain, moist, heat and cold.
- Sealed cable inlet at the base-plate for cable entry from bottom.
- Three standard sizes and customized dimensions are available.

NETWORK DISTRIBUTOR

NETWORK DISTRIBUTOR

The 2Line NVT is an organized cable distributor, functioning as overground distribution nexus in FTTx networks. Offering an organized tube, cable and splice management system meeting all requirements of modern fiber optic networks. The integrated intelligent guiding system renders it particularly easy to install and ensures full protection of the glass fibers.

Features and technical data:

- polycarbonate casing, aluminum and stainless steel interior, polycarbonate and stainless steel base socket
- protection from environmental conditions IP54, IK10, -20 °C to +45 °C
- central grounding point
- capacity of up to 1728 crimp/864 shrink splice connections distributed in up to 144 cassettes
- seats for cassettes pre-installed
- single fiber and multi fiber management possible
- sealed base plate for cable insertion and up to 168 tubes
- insertion of up to 7 tube bundles, for example 24 x Ø 7 mm and/or for example 5 cables Ø 8 mm – Ø 20 mm
- up to 7 fittings for Ø 50 mm sealings of tube bundles
- including ground base with c-rail
- storage of uncut bundles and fibers (loop)
- assembly of the complete device with 4 screws through front access
- locking of the outer housing via swivel lever for profile half-cylinder

- Easy front access to the splice area, access to the tube area via hinged door.
- Up to 1728 splice connections.
- Splice connections are possible among all fibers (any-to-any).
- Tube bundles are inserted through the base plate and are sealed there.
- Single tubes are sealed with gas and water stoppers at the inner terminal.
- Easy blow in of cables and available storage space for over length.
- All cables, tubes and fibers are protected internally and guided with the correct bend radius.
- Unused and/or uncut loose tubes (loop) can be stored.

*Capacity of the splices refers to crimp splice protection; capacity of insertable micro tubes refers to tubing 24 x Ø 7 mm, other tubing and tubing such as e.g. 12 x Ø 10 mm are possible.

ACCESSORIES

There is additional accessory and there are more variants for installing the tubes, cables and fibers available as e.g.:

- Splice tray system 2Line SKS: Splitter cassette, colored cassette, shrink splice cassette, single fiber management cassettes
- Cable glands 2Line KDF: e.g. 2 x M20, 2 x M25
- Sealings for tube bundles 2Line ARV: 24 x Ø 7 mm, 12 x Ø 10 mm

Special setups, sizes and adjustments on request.

Optic fiber management boxes

OPTICAL TERMINATION CLOSURE

FIBER OPTIC CLOSURE

The 2Line OTC fiber optic closure has been developed for the application in FTTH networks. With its innovative sealing system it is suitable for all areas of application.

Features and technical data:

- protection category IP68 (5 m)
- meets DIN EN 50411 Category A (outdoor), G (manhole) and S (ground)
- fiber change, right, left, front, rear
- bending radius controlled management
- cassettes snap in open position
- preequipped with standard seals

- For single fiber management and multiple fiber management.
- Cassette system supports crimp splice protection, shrink splice protection, splitter, WDM's and water sensor.
- Bending radius control and protection of all cables and fibers.
- Suitable for all types of cables.
- Integrated shrinkless sealing system of the cables.
- Sealing interchangeable, redetachable and retrofittable.
- No special tools required, simple indication of the seal.
- Closure suitable for installation outdoor, at pole, in manhole or into the ground.
- Easy insertion of uncut fibers and bundles (Loop).
- Direct entering of tubes with integrated gas/water stop function.
- Simple self-explanatory assembly.

Options: Seals and cassettes pre-fabricated and equipped according customer requirements, pre-fabricated tube/hose packages according customer requirements, pressure valve, RFID Chip/BAR-Code/QR-Code, grounding kit, additional internal strain relief, additional outer cable clamp, splitter

ACCESSORIES

There is additional accessory and there are more splice cassette variants available as e.g.

- Splice tray system 2Line SKS: Splitter cassette, colored-cassette, shrink splice cassette, single fiber management cassettes, water sensor

Optic fiber management boxes

CUSTOMER OUTLET BOX

CUSTOMER OUTLET BOX

2Line COB is a fiber optic connecting unit system for the optical access network infrastructure with a compact optic fiber management system. It is used for inhouse, as a small cabinet and for outdoor application.

The 2Line COB is a distribution box for connecting and splicing fiber optic cables. It can be mounted on walls in- or outdoor. The cables are inserted into the box from below, where they are relieved and sealed.

In the 2Line tray system, the fibers are guided and spliced respecting the bending radius. It allows individual access to any single connection and fibers without affecting or disturbing existing connections. So it enables optimal handling during installation, operation, service and upgrades.

There are a variety of different configuration options. The cover can be locked by a locking system.

Features and technical data

- zinc and powder coated steel box RAL 7035
- removable cover
- environmental protection class IP54, -10 °C to +45 °C
- sealing of the cable entry from the bottom with
- multiple feedthrough or brush stripe
- cable dimensions ø 3 – ø 25 mm
- integration of splitters, WDM and attenuator
- simple wall installation
- with locking system

- Powder coated steel box RAL 7035 or customized.
- Fiber management system for configuration, connection and splicing.
- Tray system for single fiber or multi-fiber management.
- Installation of crimp or heat shrink splice protection possible.
- Extensive range of accessories available.

COB

| Item | Variation | Dimensions (mm) W x H x D Capacity max. | Article code | Article number |
|---|-----------|---|----------------------|----------------|
| Housing galvanized sheet steel, powder coated | GR3 | 440 x 265 x 150/ 360 Splice/24 Ports | 2Line COB GR3 | 20148 |
| | GR4 | 440 x 415 x 150/ 720 Splice/108 Ports | 2Line COB GR4 | 20149 |
| | GR5 | 440 x 640 x 150/ 1080 Splice/216 Ports | 2Line COB GR5 | 20150 |
| | GR6 | 514 x 640 x 150/ 1512 Splice/288 Ports | 2Line COB GR6 | 20151 |

*Capacity of the splices refers to the crimp splice protection;
capacity of the ports refers to LC connectors where the number of splices are reduced when connectors are installed.

ACCESSORIES

There is additional accessory and material for installing the tubes, cables and fibers available as e.g.

- Splice tray system 2Line SKS: Splitter cassette, colored cassette, shrink splice cassette, single fiber management cassettes
- Adapter holder 2Line ADH: Mounting plate for SC, LC and E2000 adapter
- Cable glands 2Line KDF: e.g. 2 x M20, 2 x M25, brush strip

Special setups, sizes and adjustments on request.

Optical telecommunication outlet

OPTICAL WALL OUTLET

CUSTOMER LINE TERMINATION

OWO is an optical wall outlet box. With this box the optical line termination for outdoor or indoor area is realized for buildings and participants. In a robust and stackable plastic housing all features and function for a professional transfer and termination point of an FTTx network are represented.

Features and technical data:

- capacity up to 72 fibers and 24 slots for SC, LC and E2000 adapters
- flat and robust design for mounting on the wall or at pole
- box stackable with transfer for fibers
- can be built as a pure splice box with several cable entries
- fiber optics are protected within the housing and guided in the correct bending radius
- overlengths can be stored
- cable entry from below with strain relief, cable gland or as tube with gas/water sealing
- replaceable splice holder or cassette system for crimp or shrink splices

- Plastic injection molded housing made of PC/ABS
- Color RAL 9010
- Degree of protection IP54, -20 ° C - + 60 ° C
- Halogen-free, UV-stabilized and flame retardant UL94 V-0
- Guides and storage for 24 pigtails à 140 cm
- Storage of up to 72 splices in single or multi-fiber management
- Installation of splitters or WDM's possible
- 12 slots for adapters SC, LCdx or E2000
- Cable/tube entry up to Ø 18 mm with gas/water sealing
- Access protection through lock, safety screw, lead seal or tape seal
- Single fiber management

Optical telecommunication outlet

OPTICAL WALL OUTLET

Configure
your product
individually!

You can choose from two setup types and configure these individually with the appropriate connector types, fibers and provided seals.

All setups can be pre-assembled or added loosely.

Optical telecommunication outlet

OPTICAL TELECOMMUNICATION OUTLET

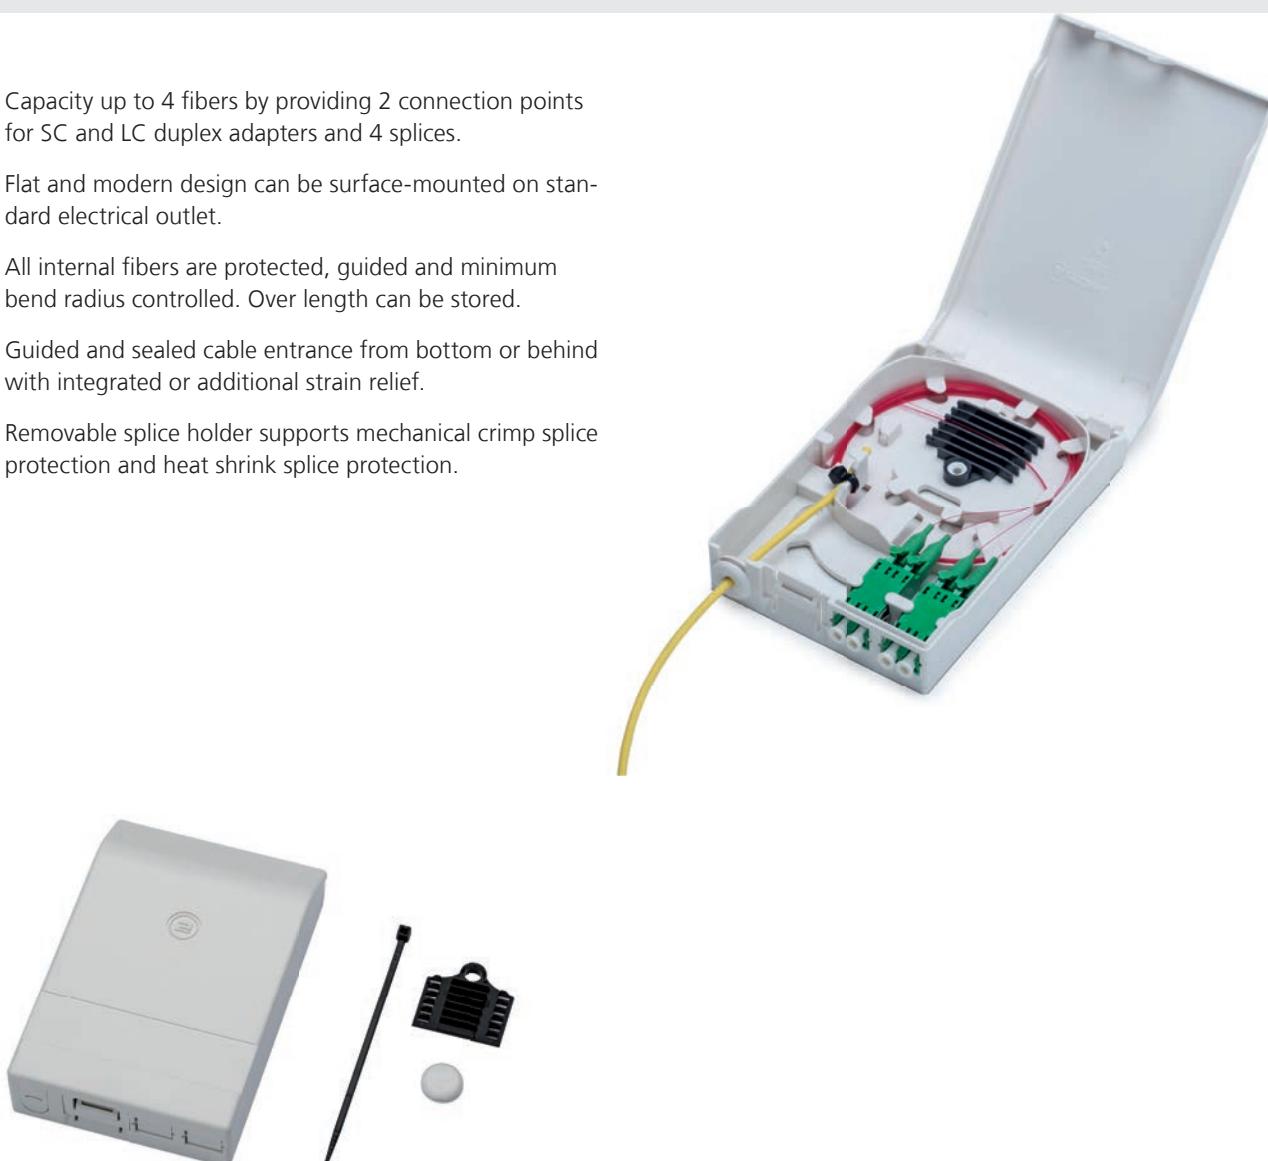

OPTICAL TELECOMMUNICATION OUTLET

The OTO is a fiber optic outlet that allows easy termination of cables in an office and home environment. In a compact small housing all features are provided for an advanced FTTH installation.

Features and technical data

- molded solid plastic box made of ABS
- color RAL 9010
- environmental protection class IP20, -10° C to +60° C
- fire protection class UL94 V-0
- guiding and storage for 4 fiber pigtailed, 140 cm
- 2 adapter places for SC and LCdx
- input cable diameter 3 – 7 mm through boot
- with integrated or additional strain relief.
- removable splice holder supports mechanical crimp splice
- protection and heat shrink splice protection.

- Capacity up to 4 fibers by providing 2 connection points for SC and LC duplex adapters and 4 splices.
- Flat and modern design can be surface-mounted on standard electrical outlet.
- All internal fibers are protected, guided and minimum bend radius controlled. Over length can be stored.
- Guided and sealed cable entrance from bottom or behind with integrated or additional strain relief.
- Removable splice holder supports mechanical crimp splice protection and heat shrink splice protection.

Single building entries – open construction

WALL-MOUNTED ENTRIES, RESIN INJECTION SYSTEM

FOR COMMUNICATION CABLES/FIBRE OPTIC CABLES

Features and technical data:

- waterproof concrete stress class 1, stress class 2
- DIN 18533 W1.1-E, W1.2-E, W2.1-E
- universal building entry with resin injection system for drill holes in the most common types of wall
- for holes ID 30 mm, for min. wall thicknesses 200 mm
- horizontal installation or with an inclination of up to 45°
- sealing lips ensure gentle seal for micropipes
- quickly installed in just a few minutes
- no restoration of basement seal to DIN 18533 W2.1-E is necessary
- gastight and watertight to 1 bar

Scope of supply/sales unit:

- 20 x GFH 30
- 20 x mixing nozzle
- 10 x 2-component resin iM3000, 150 ml

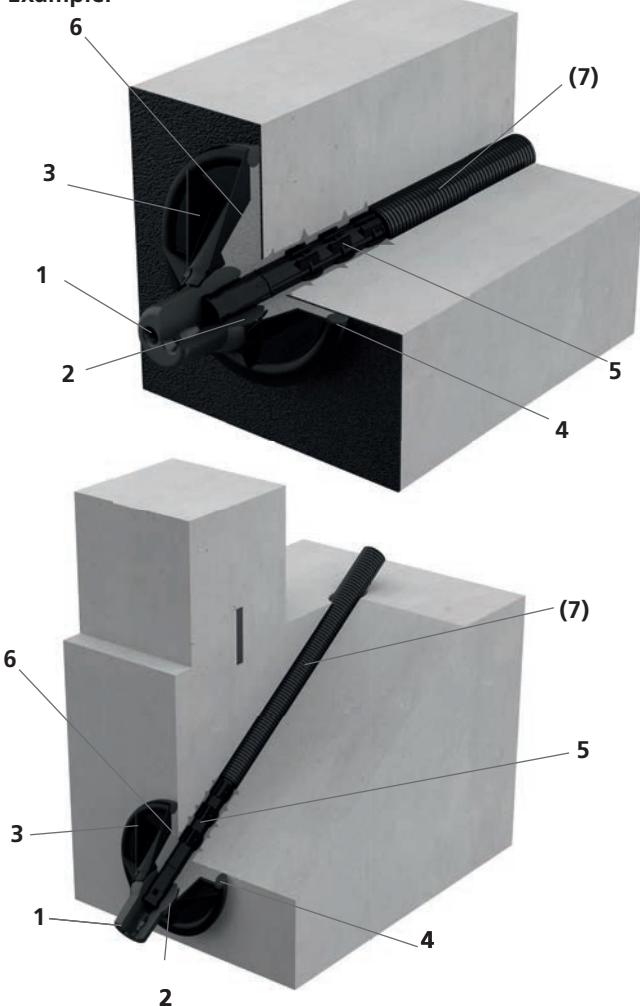

■ 1 x adapter/plunger for the cartridge gun

■ 1 x dosage sleeve for injection of half the cartridge quantity

Necessary accessories:

- Cartridge gun

Example:

1. Sealing lips
2. Ball head
with integrated snap-in sleeve for receiving the punching pin.
3. Flange with joint
covers the wall break-through, ties in the building seal on the outer wall, and allows a horizontal or inclined installation. The resin is injected through a filler opening at the flange.
4. Butyl tape
ensures a tightly sealed connection between the wall surface/building seal and the flange.
5. Punching pin
with stays to hold it securely in the drill hole.
6. Expanded 2-component resin
fills the spaces between the flange and the wall surface/building seal and between the drill hole and punching pin, including any blowholes and cavities, and creates a reliable seal.
7. PE corrugated pipe (optional)
this is pushed directly onto the punching pin. It protects the cables and allows carrier lines to be added or replaced at a later date.

Single building entries – open construction

WALL-MOUNTED ENTRIES, RESIN INJECTION SYSTEM

GFH 30

| Number of cables/ carrier lines | Suitable for carrier pipe OD (mm) | Article code | Article number | Figure |
|------------------------------------|-----------------------------------|-----------------------|----------------|---|
| 2 | 7 – 10 | GFH 30/2x7-10 | 2900001301 |  |
| 1 | 12-16 | GFH 30/1x12-16 | 290001303 | |

Accessories can be found on the accessories page 72.

Single building entries – open construction

WALL-MOUNTED ENTRIES, RESIN INJECTION SYSTEM

FOR COMMUNICATION CABLES

Features and technical data:

- waterproof concrete, stress class 1, stress class 2
- DIN 18533 W1.1-E, W1.2-E, W2.1-E
- universal building entries with membrane injection system for drill holes in the wall
- sealing lips ensure gentle seal for carrier lines
- controlled ejection of resin through slit membrane hose
- quickly installed in just a few minutes
- no restoration of basement seal to DIN 18533 W2.1-E is necessary
- suitable for core drill hole ID 40 to 50 mm
- gastight and watertight to 1 bar

Scope of supply/sales unit:

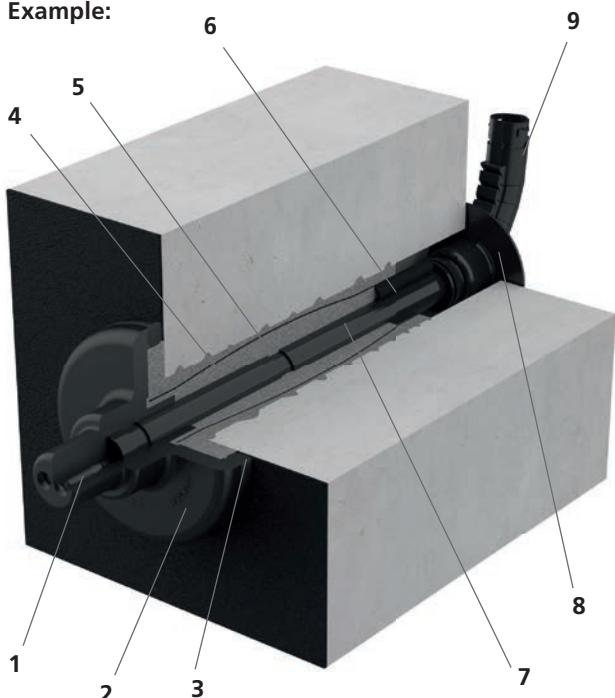

- 10 x MIS 40
- 10 x wall rosette
- 10 x tubular guide elbows
- 10 x 2-component resin iM3000, 150 ml
- 1 x quick tensioning device MIS 40-SVS

Necessary accessories:

- Cartridge gun, suitable for use with double chamber cartridges

Article code, article number and other, optional accessories can be found on page 72.

Example:

1. Sealing lips

2. Flange
covers the wall break-through and ties in the building seal on the outer wall.

3. Butyl tape
ensures a tightly sealed connection between the wall surface/building seal and the flange.
4. Membrane tube
5. Expanded 2-component resin
fills the spaces between the flange and the wall surface/building seal and between the drill hole and the pipe, including any blowholes and cavities, and creates a reliable seal.
6. Resin injection tube
ensures targeted injection of the 2-component resin from inside the building.
7. Duct
this protects the cables and allows carrier lines to be added or replaced at a later date.
8. Wall rosette
ensures a tidy finish on the inside of the building.
9. Tubular guide elbow
aligns the carrier line at the inner wall in the desired direction and ensures compliance with the minimum permitted bending radius of micropipes.

WALL-MOUNTED ENTRY, RESIN INJECTION SYSTEM

FOR WATER, ELECTRICITY AND TELECOMMUNICATIONS SERVICES

Features and technical data:

- waterproof concrete, stress class 1, stress class 2
- DIN 18533 W1.1-E, W1.2-E, W2.1-E
- universal building entries with membrane injection system for drill holes in the wall
- flexible sealing sleeve with segmented ring technology ensures simultaneous, gentle sealing of water and communication services or electricity and communication services
- controlled ejection of resin through slit membrane hose
- quickly installed in just a few minutes
- no restoration of basement seal to DIN 18533 W2.1-E is necessary
- suitable for core drill hole ID 92 to 102 mm
- gastight and watertight to 1 bar

Scope of supply/sales unit:

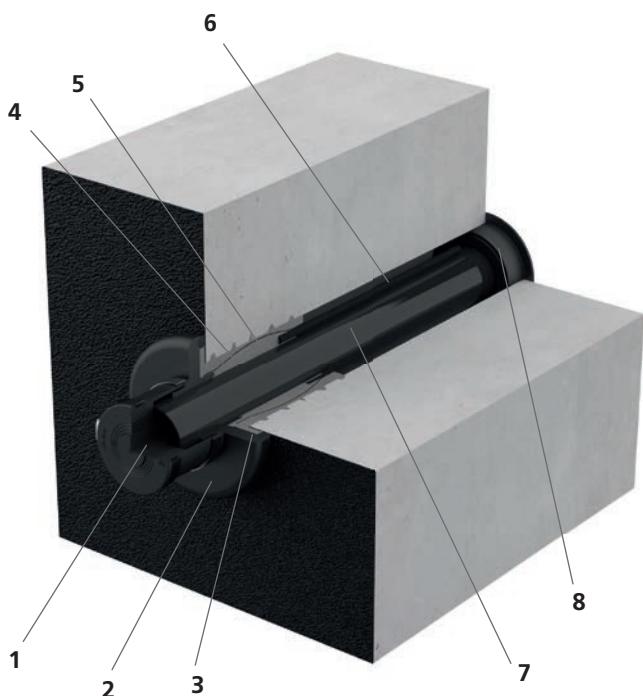

- 6 x MIS 90
- 6 x wall rosette WAR 90

Necessary accessories:

- Quick tensioning device MIS 90-SVS
- Cartridge gun, suitable for use with double chamber cartridges
- 2-component resin M3000 EH 300/1400

Article code, article number and other, optional accessories can be found on page 72.

Example:

1. Sealing sleeve
with segmented ring technology for sealing the carrier line.
2. Flange
covers the wall break-through and ties in the building seal on the outer wall.
3. Butyl tape
ensures a tightly sealed connection between the wall surface/building seal and the flange.

* Speedpipe installation in flange and wall rosette and thus outside the sleeve pipe

Accessories can be found on the accessories page 72.

Single building entries – open construction

FLOOR ENTRY, RESIN INJECTION SYSTEM

FOR WATER, ELECTRICITY AND TELECOMMUNICATIONS SERVICES

Features and technical data:

- waterproof concrete, stress class 1, stress class 2
- DIN 18533 W1.1-E, soil moisture
- universal building entries with membrane injection system for inclined drill holes in walls or floors
- flexible sealing sleeve with segmented ring technology ensures simultaneous, gentle sealing of water and communication services or electricity and communication services
- controlled ejection of resin through slit membrane hose
- variety of pre-mounted seal inserts for variable configuration
- quickly installed in just a few minutes
- suitable for core drill hole ID 92 to 102 mm
- gastight and watertight to 1 bar

Scope of supply/sales unit:

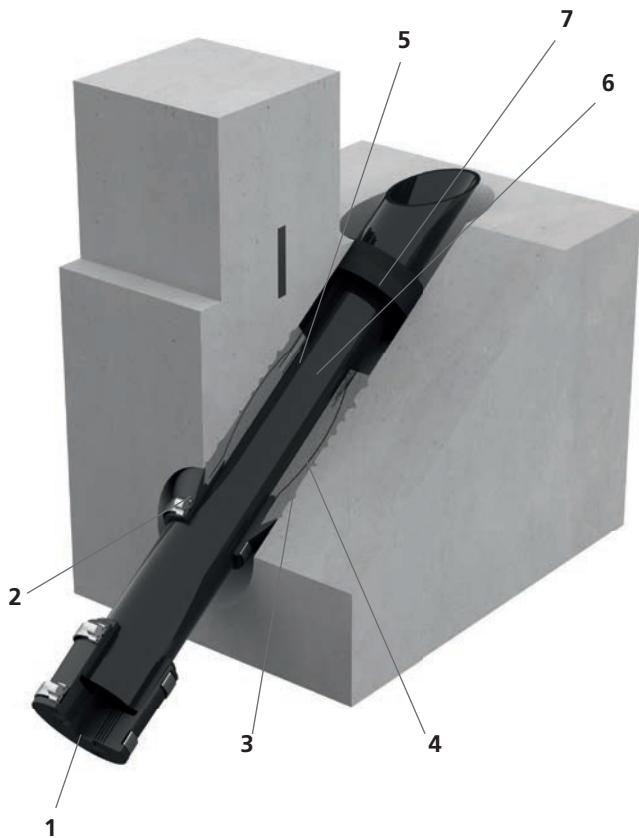

- 1 x MIS 90
- 1 x sealing cap

Necessary accessories:

- Quick tensioning device MIS 90-SVS
- Cartridge gun, suitable for use with double chamber cartridges
- 2-component resin M 3000 EH300/1400

Article code, article number and other, optional accessories can be found on page 72.

Example:

1. Sealing sleeve
with segmented ring technology for sealing the carrier lines.
2. Flange
remains in the drill hole and ensures controlled injection of the resin.
3. Membrane tube
4. Expanded 2-component resin
fills the spaces between the flange, drill hole and pipe, including any blowholes and cavities, and creates a reliable seal.
5. Resin injection tube
ensures targeted injection of the 2-component resin from inside the building.
6. Duct
this protects the cables and allows carrier lines to be added or replaced at a later date.
7. Sponge rubber ring
ensures a tidy finish on the inside of the building.

Single building entries – open construction

FLOOR ENTRY, RESIN INJECTION SYSTEM

MIS 90S – INCLINED BUILDING ENTRY FOR BUILDINGS WITHOUT A BASEMENT

| Number of cables/ carrier lines | Suitable for carrier pipe OD (mm) | Overall length (mm) | Article code | Article number | Figure |
|------------------------------------|---|---------------------|-------------------|----------------|---|
| 1 | 1 x 24 – 52 | 1,300 | MIS 90S-U | 2900200510 |  |
| 4 | 1 x 24 – 40 3 x 7 – 12 | 1,300 | MIS 90S-EW | 2900200520 |  |
| 5 | 1 x 13 – 21 3 x 7 – 13 1 x 5 – 13 | 1,300 | MIS 90S-KD | 2900200530 |  |

Accessories can be found on the accessories page 72.

Single building entries – trenchless construction

WALL-MOUNTED ENTRY, RESIN INJECTION SYSTEM

FOR ELECTRICITY AND TELECOMMUNICATIONS SERVICES

Features and technical data:

- waterproof concrete, stress class 1, stress class 2
- DIN 18533 W1.1-E, soil moisture
- universal building entries with membrane injection system for drill holes in the wall
- sealing lips ensure gentle sealing
- trenchless construction means no groundwork is necessary at the property
- controlled ejection of resin through slit membrane hose
- variety of pre-mounted seal inserts for variable configuration
- quickly installed in just a few minutes
- suitable for core drill hole ID 62 to 65 mm
- gastight and watertight to 1 bar

Scope of supply/sales unit:

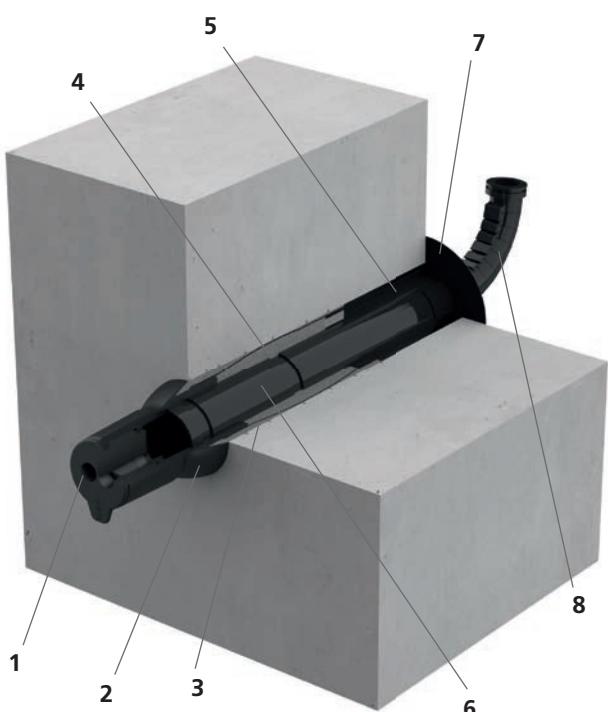

- 10 x MIS 60-ND
- 10 x wall rosette
- 10 x 2-component resin iM3000, 150 ml
- 1 x core drill cleaning brush
- 1 x quick tensioning device MIS 60-SVS

Necessary accessories:

- Cartridge gun, suitable for use with double chamber cartridges

Article code, article number and other, optional accessories can be found on page 72.

Example:

1. Sealing lips
2. Flange
controls the exit of the resin at the wall of the building.
3. Membrane tube
4. Expanded 2-component resin
fills the spaces between the flange and the wall surface and between the drill hole and the pipe, including any blowholes and cavities, and creates a reliable seal.
5. Resin injection tube
ensures targeted injection of the 2-component resin from inside the building.
6. Duct
this protects the cables and allows carrier lines to be added or replaced at a later date.
7. Wall rosette
ensures a tidy finish on the inside of the building.
8. Tubular guide elbow
aligns the carrier line at the inner wall in the desired direction and ensures compliance with the minimum permitted bending radius of micro-pipes.

trenchless method with underground rocket

ACCESSORIES

SPLICE/PATCH MODULES

The 2Line Splice/Patch Modules are compact connection and termination solutions for our passive fiber optic network systems such as ODF, ODR and MFC. With their high fiber and port capacities in all common connector types, it is possible to realize compact, simple and clearly comprehensible systems. The highest tested quality and solid design guarantee safety and long operational life.

Features and technical data:

- modules in 1, 2 or 3 height units 19" (44.45 mm)
- 2 trays/HE (ST) or 3 trays/HE (HD)
- 24 connections per tray
- connector types: SC, LC and E2000 in PC, UPC or APC
- equipped with adapters and pigtailed
- colored pigtailed set and laid bend radius controlled
- 1.5 m fiber forward color marked and laid in splice cassette
- splice cassette with splice holder for crimp splice protection or shrink splice protection
- printed and labelled following norm or customer specification

- Compact modules with the highest port density.
- Space-saving design.
- Easy and self-explanatory assembly.
- Smooth installation through logical color coding.
- Guiding of the fibers bend radius controlled and safe.
- Completely modular system.
- Protected access to the optical components.
- Additional functions for installation and maintenance.
- Labelling according to customer specifications.
